

ISTA-320, Cohort 3

C# Step by Step, Chapter 27

December 3, 2017

1. Can a UWP app directly access a relational database by using technologies provided by Microsoft? Why or why not?
2. Describe how the *Entity Framework* works.
3. What is the difference between the *code-first* and the *database-first* approaches to developing UWP apps?
4. What is a *partial class*? Why would we want to create partial classes?
5. Describe a RESTful web api. (Not in book.) Write a brief description of *Representational State Transfer*. What problem was it designed to solve?
6. Give a brief description of the functionalities of these HTTP commands: GET, POST, PUT, DELETE.
